

AJAX/API LAB

POOR MAN'S REDDIT

Task: Create a webpage that displays the posts from the AWW Subreddit.

Build Specifications

1. Use jQuery to request data from the <https://www.reddit.com/r/aww/.json> API.
2. Display the results on the page.
3. At minimum, include a title, image and working link for each post. (Easiest is to use the thumbnail for the image, but there are other images in the JSON response.)
4. Make it look good with some CSS.

Bonus

Only show the first 10 results.
